A few weeks ago our very own [Kohsuke Kawaguchi](#) gave a presentation at the [Silicon Valley CI Summit](#) held in Mountain View.

Within the presentation, Kohsuke included a collection of numbers about the vibrancy of the Jenkins project that certainly hasn't gotten enough attention. While the slideshow is embedded below, here's some good high-level points:

- Brief overview of Continuous Deployment
- Meet Gerrit
- A Basic Commit-to-Deploy Pipeline
- Multiple branches with Gerrit + Jenkins
- The Human Factor
- Pro-tips/best practices

Continuous Deployment

What it isn't

Create Issue

Project **Server**

Issue Type  **Story**

Summary *

Use "should" or "shouldn't". Example: "Logo on website homepage should be green, not blue"

Priority 

Describes how urgently Engineering has decided to address this issue.

P1 = Must address this ASAP; next release can't go out without this change. P2 = Very important, but may not

P3 = Like to have, but won't delay a release for it. P4 = Do only if have time and doesn't risk anything.

Component/s

Start typing to get a list of possible matches or press down to select.

What it is

Who is using it?

Why Code Review?

Why Code Review?

As a code review tool

Reviewer	Verified	Code Review	
Leeroy	✗		Fails
Dr Krieger		-1	I would prefer that you didn't submit this
Gilette		-1	I would prefer that you didn't submit this
Lana Kane		-1	I would prefer that you didn't submit this

- Need Verified +1 (Verified)
- Need Code Review +2 (Looks good to me, approved)

Woodhouse (1000006)

As a code review tool

```
31 /*
32
33 #include "ttyclock.h"
34 #include <stdlib.h>
35
36 void
37 init(void)
38 {
39     struct sigaction sig;
40     ttyclock->bg = COLOR_BLACK;
```

```
31 /*
32
33 #include "ttyclock.h"
34 #include <stdlib.h>
35
36 void
37 init(void)
38 {
39     struct sigaction sig;
40     ttyclock->bg = COLOR_BLACK;
41     int *derp = NULL;
```

(Draft)

Draft saved at 12:03 PM

Poor variable naming

Edit

```
42     int foo = 1 + *derp;
```

(Draft)

Draft saved at 12:04 PM

This is a seriously terrible idea.

Edit

```
41
42     /* Init ncurses */
43     initscr();
44     cbreak();
45     noecho();
46     keypad(stdscr, True);
47     start_color();
```

```
43
44
45     /* Init ncurses */
46     initscr();
47     cbreak();
48     noecho();
49     keypad(stdscr, True);
50     start_color();
```

As a Git repository server

```
~ % git checkout -b change-4
Switched to a new branch 'change-4'
~ % git fetch Gerrit refs/changes/04/4/1
From Gerrit:tttyclock
* branch                refs/changes/04/4/1 -> FETCH_HEAD
~ % git cherry-pick FETCH_HEAD
Finished one cherry-pick.
[change-4 1d4351c] Greatly improve the stability of tty-
clock
1 files changed, 3 insertions(+), 0 deletions(-)
~ %
```

As a collaboration tool

```
'39     struct sigaction sig;  
40     ttyclock->bg = COLOR_BLACK;  
41     int *derp = NULL;
```

Dr Krieger Poor variable naming	12:11 PM
--	----------

```
42     int foo = 1 + *derp;
```

Dr Krieger This is a seriously terrible idea.	12:11 PM
--	----------

% git push gerrit HEAD:refs/for/master
```

Flow of changes

Flow of changes

Your development workflow in commands

- `git checkout -b local-topic-branch`
- **work work work**
- `git rebase -i upstream/master # fix up commits`
- `git push gerrit HEAD:refs/for/master`
- **Create new commits based on reviews**
- `git rebase -i upstream/master # squash up`
- `git push gerrit HEAD:refs/for/master`

REBASE IS SCARY
(but necessary)

How it works

`% git rebase upstream/master`

How it works

upstream/master

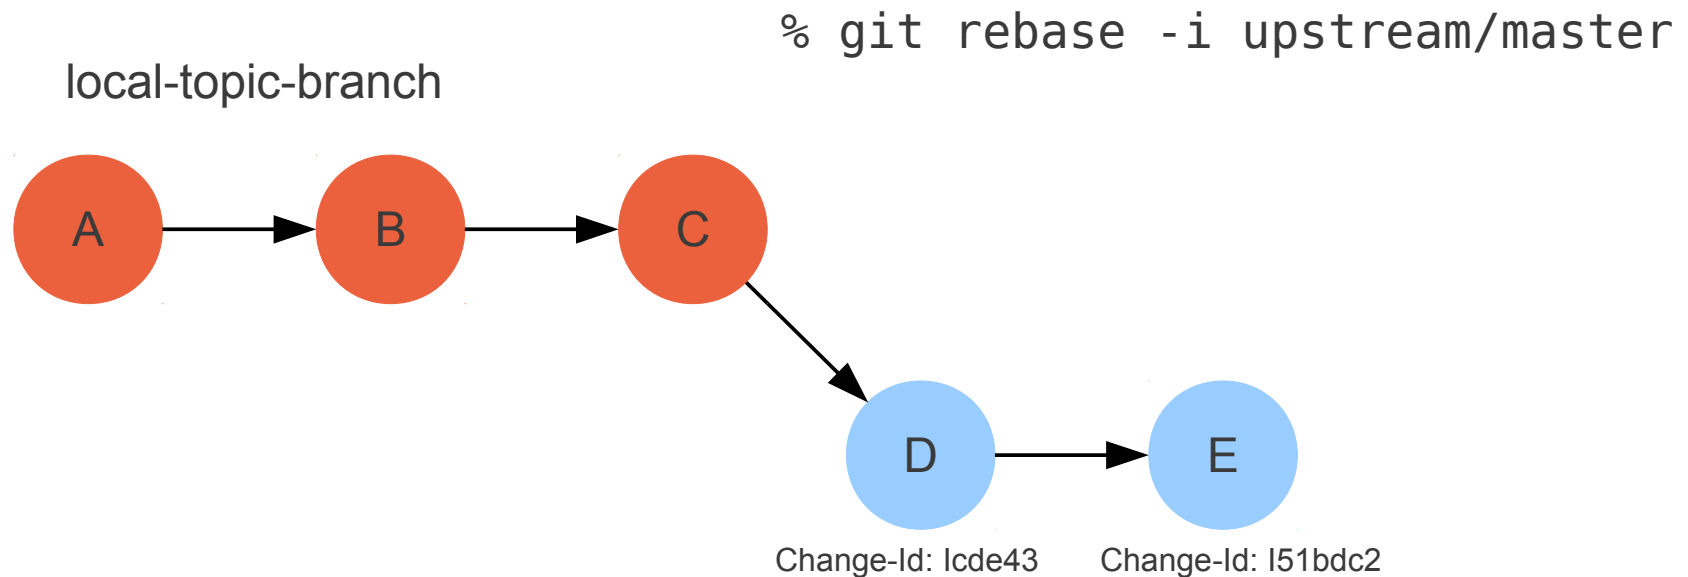

local-topic-branch

How it works

```
~ % git rebase -i origin/master
```

```
pick e59df21 Greatly improve the stability of tty-clock  
squash 6c1ffe1 Fix some whitespace
```

```
[detached HEAD 785692b] Greatly improve the stability of tty-clock  
1 files changed, 2 insertions(+), 0 deletions(-)  
Successfully rebased and updated refs/heads/change-4.

Kick-off deployments with the Promoted Builds plugin

Promotion process

Name

Icon

☐ Restrict where this promotion process can be run

Criteria

☒ Only when manually approved

Approvers

Approval Parameters

☐ Promote immediately once the build is complete

☐ When the following downstream projects build successfully

☐ When the following upstream promotions are promoted

Actions

☐ **Keep Build Forever**

☐ **Deploy artifacts to Maven repository**

Promotions

Release Candidate

Promotion History

 [ttyclock » promotion » Release Candidate #1](#)

Qualification (promoted 2 mo 14 days ago — 1 sec after build)

Automatically promoted immediately after the build

Status

 Successfully promoted ([log](#))

Re-execute promotion

Release

Promotion History

 [ttyclock » promotion » Release #1](#)

Qualification (promoted 15 sec ago — 2 mo 14 days after build)

Manually Approved

Approved by anonymous

Status

 Successfully promoted ([log](#))

Re-execute promotion

Pro Tips

Use “squash” or “fixup” to condense changes

Create per-topic/ticket local branches for
clearer isolation of work

Multiple jobs with the same trigger criteria

Investigate the EC2 plugin for burstable
testing capacity
